## **DETAILED ACTION**

## Allowable Subject Matter

The indicated allowability of claims 35-37,41,43, and 44 have been withdrawn in view of the new interpretation of the prior art of record.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 30,32, and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Petersen (U.S. Patent No. 5,479,797) in view of applicant's admitted art in the specification, page 3, lines 5-8, de Jong (U.S. Patent No. 4,612,719), and Tokunaga (U.S. Patent No. 5,168,281).

Petersen shows in figures 1-6 a disposable attachment means (20) and a reusable securement means (10). The extremities of the attachment means pass through openings in the securement means and overlap, see figures 4 and 5. Petersen shows in figures 2 and 3 that one end of the strap includes an opening (26) for receiving a mounting boss (32) therein. Petersen shows in figures 1,2, and 5 that the securement means defines an opening for slide-through passage of the strap second end. Petersen does not disclose attaching a radio frequency identification device to

Art Unit: 3611

the securing means and attaching an antenna for the radio frequency identification device to the strap. The applicant discloses in the specification that the use of radio frequency identification devices are known in the art. De Jong shows in figure 1 the idea of embedding a detection device (2) within a securing device. In view of the teachings of the applicant's admitted prior art and de Jong it would have been obvious to one in the art to modify Petersen by attaching a radio frequency identification device (RFID) to the securing means since this would allow electronic information to be stored on the assembly, the information changed as desired, and the information transmitted to a distant location in an easier and faster manner. Tokunaga shows in figures 1-4 a device comprising an elongated and disposable flexible strap (2,4) having an antenna (3) carried on the strap, and coupling means (5,12) for operatively and removably connecting the antenna with the receiver when the securement means is connected to the strap, and for disconnecting the antenna from the receiver when the securement means is disconnected from the strap. In view of the teachings of Tokunaga it would have been obvious to one in the art to modify Petersen in view of the applicant's admitted prior art and de Jong by placing an antenna within the band since this would allow the RFID to both transmit and receive signals in a better manner.

Claims 35-37,41,43, and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over MacDonald (U.S. Patent No. 5,323,554) in view of applicant's admitted art in the specification, page 3, lines 5-8, de Jong (U.S. Patent No. 4,612,719), and Tokunaga (U.S. Patent No. 5,168,281).

Application/Control Number: 09/033,832

Art Unit: 3611

MacDonald shows in figures 1-10 a disposable tubular band (10 or 14) and a reusable securement means (16 or 16' or 16"). The opposite ends of the strap (10 or 14) have openings which receive the opposite ends of the securement means. MacDonald does not disclose attaching a radio frequency identification device to the securing means and attaching an antenna for the radio frequency identification device to the strap. The applicant discloses in the specification that the use of radio frequency identification devices are known in the art. De Jong shows in figure 1 the idea of embedding a detection device (2) within a securing device. In view of the teachings of the applicant's admitted prior art and de Jong it would have been obvious to one in the art to modify MacDonald by attaching a radio frequency identification device (RFID) to the securing means since this would allow electronic information to be stored on the assembly, the information changed as desired, and the information transmitted to a distant location in an easier and faster manner. Tokunaga shows in figures 1-4 a device comprising an elongated and disposable flexible strap (2,4) having an antenna (3) carried on the strap, and coupling means (5.12) for operatively and removably connecting the antenna with the receiver when the securement means is connected to the strap, and for disconnecting the antenna from the receiver when the securement means is disconnected from the strap. In view of the teachings of Tokunaga it would have been obvious to one in the art to modify MacDonald in view of the applicant's admitted prior art and de Jong by placing an antenna within the band since this would allow the RFID to both transmit and receive signals in a better manner.

Response to Arguments

Applicant's arguments with respect to claims 30,32,35-38,41,43, and 44 have been

considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Brian K. Green whose telephone number is (571) 272-6644. The

examiner can normally be reached on M-F 7am-3:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Lesley Morris can be reached on (571) 272-6651. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
